

## **IN THE SPECIFICATION:**

Please append the abstract below to the specification.

### **Abstract**

A storage system comprising two or more pouches joined sequentially pouch-lip to pouch-lip by a flexible coupling portion, wherein each coupling portion flexes to permit manipulation of the joined set of pouches, combines advantageous modes of storage, display and access, such as paging, tipping/fan, accordion, parallel, push down, reverse parallel, and pull up modes, with a greatly simplified manufacturing process. The storage system is a very versatile product, suitable for use with a wide variety of inserts, whether planar or non-planar objects, solids or liquids, and for a wide variety of uses to improve identification, retrieval or dispensing of stored inserts.
